

AGIP GREASE CC

AGIP GREASE CC are yellow, smooth-textured buttery, calcium-base greases which resist washout even by hot water.
The various grades differ only in consistency.

CHARACTERISTICS (TYPICAL FIGURES)

AGIP GREASE CC		2	3	4
NLGI consistency		2	3	4
Base oil viscosity at 40°C	mm ² /s	65	65	65
Worked penetration	dmm	280	235	190
ASTM dropping point	°C	100	100	100

PROPERTIES AND PERFORMANCE

- These greases form a film with good lubricating characteristics in normal use.
- They have good water washout resistance and are insoluble even in hot water.

APPLICATIONS

AGIP GREASE CC products are suitable for dispensing by Stauffer grease cup or grease gun for the lubrication of journals, bearings, guides and universal joints even when exposed to moisture and water, but only when thermal stresses and mechanical loads (speed and pressure) are not high.
They are not suitable for use in centralized lubrication systems.
